Chapter 02: Building an SPA Application with Scully and Angular Router

```
? What name do you want to use for the module? (blog)
```

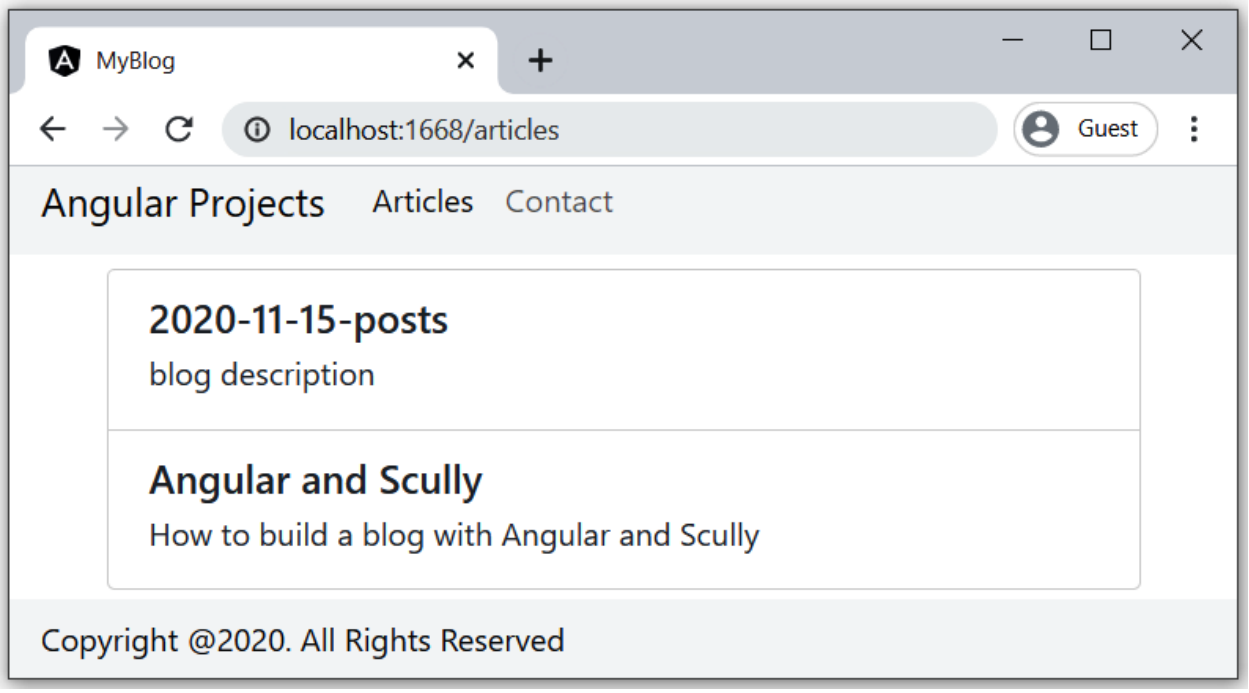

? What slug do you want for the markdown file? (id)

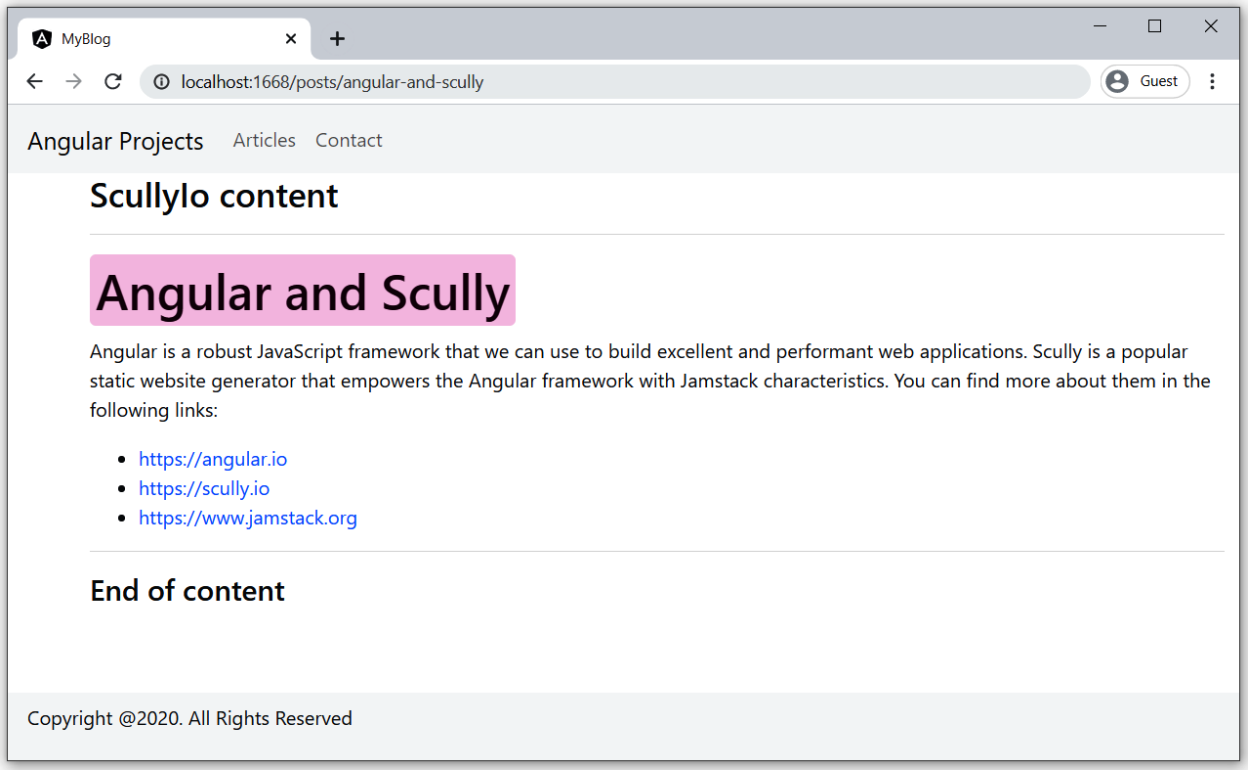

? Where do you want to store your markdown files?

? Under which route do you want your files to be requested?

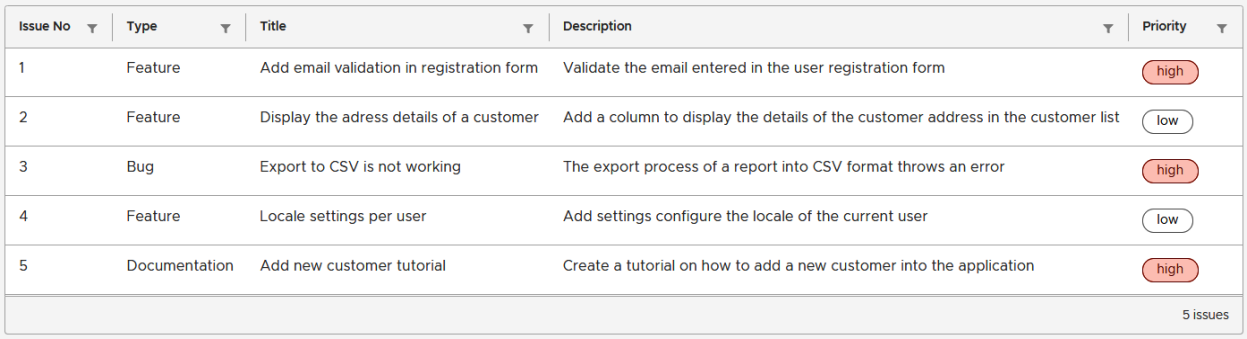

```
using plugins from folder "./scully"
⠙ starting static server
Angular distribution server started on "http://localhost:1864/"
Scully static server started on "http://localhost:1668/"
⠙
```

? What's the target folder for this post? (blog)

Angular and Scully
Angular is a robust JavaScript framework that we can use to build excellent and performant web applications. Scully is a popular static website generator that empowers the Angular framework with Jamstack characteristics. You can find more about them in the following links:
https://angular.io
https://scully.io
https://www.jamstack.org

Chapter 05: Building a WYSIWYG Editor for the Desktop Using Electron

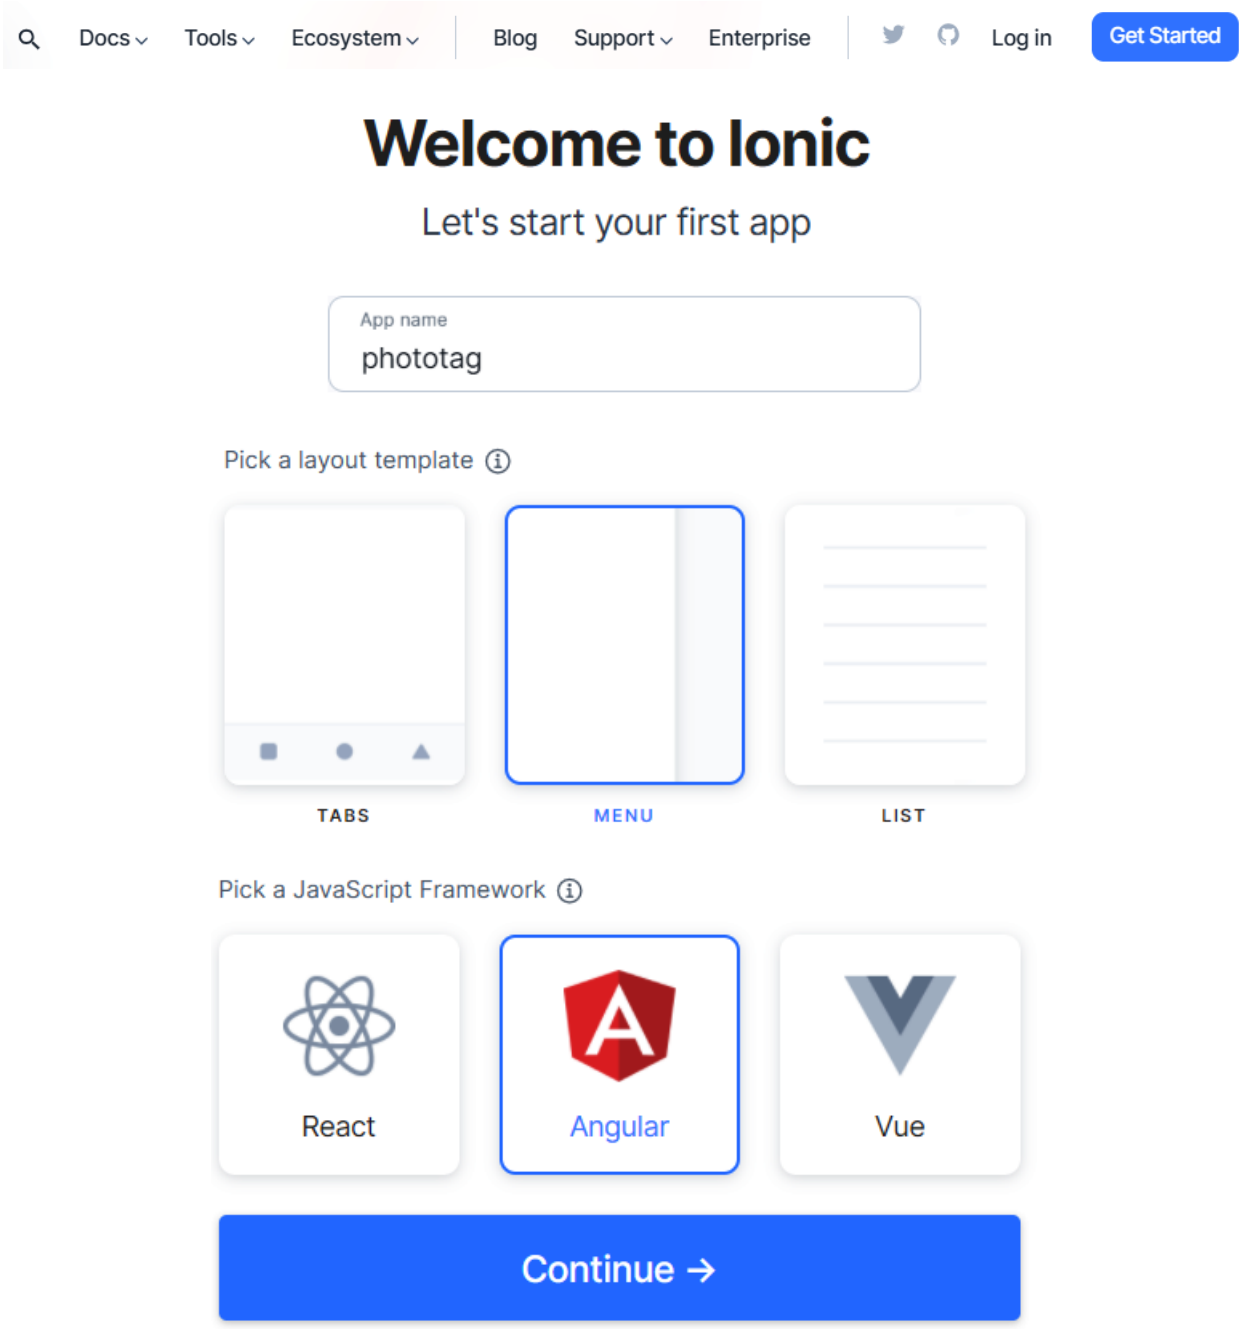

RUN AND DEBUG: RUN
Open a file which can be debugged or run.
Run and Debug
To customize Run and Debug create a launch.json file.
Show all automatic debug configurations.

Also set up **Firebase Hosting** for this app. Learn more

Hosting can also be set up later. It's free to get started at any time.

Register app

Cloud Firestore

Real-time updates, powerful queries and automatic scaling

Create database

Start in **production mode**

Your data is private by default. Client read/write access will only be granted as specified by your security rules.

Start in **test mode**

Your data is open by default to enable quick setup. However, you must update your security rules within 30 days to enable long-term client read/write access.

Cloud Firestore location

eur3 (europe-west)

Enabling Cloud Firestore will prevent you from using Cloud Datastore with this project, notably from the associated App Engine app

Chapter 08: Building an Enterprise Portal Using Nx Monorepo Tools and NgRx

Welcome to tour!

Resources & Tools

Thank you for using and showing some ♥ for Nx.

If you like Nx, please give it a star: ★ Star

Here are some links to help you get started.

Nx video course

Nx video tutorial

Interactive tutorial

 Nx Cloud

Next Steps

Here are some things you can do with Nx.

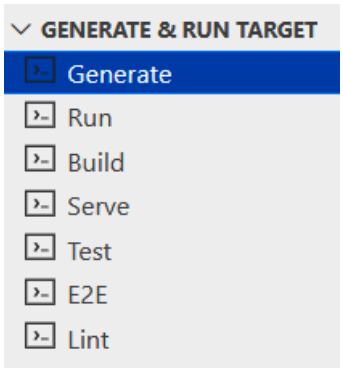

▼ Add UI library

```
# Generate UI lib
ng g @nrwl/angular:lib ui

# Add a component
ng g @nrwl/angular:component xyz --project ui
```

▶ View dependency graph

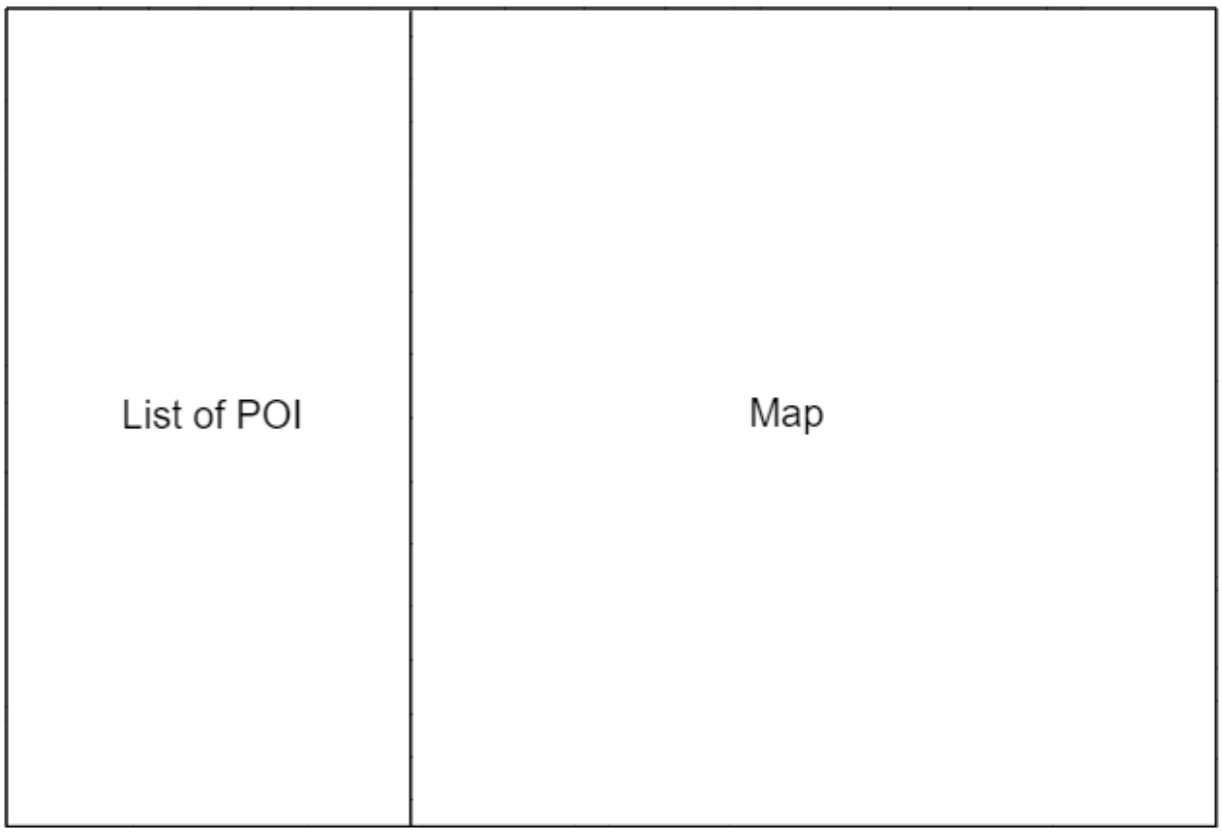

▶ Run affected commands

name

Library name

visitor

name *

The name of the component.

visitor

project

The name of the project.

visitor

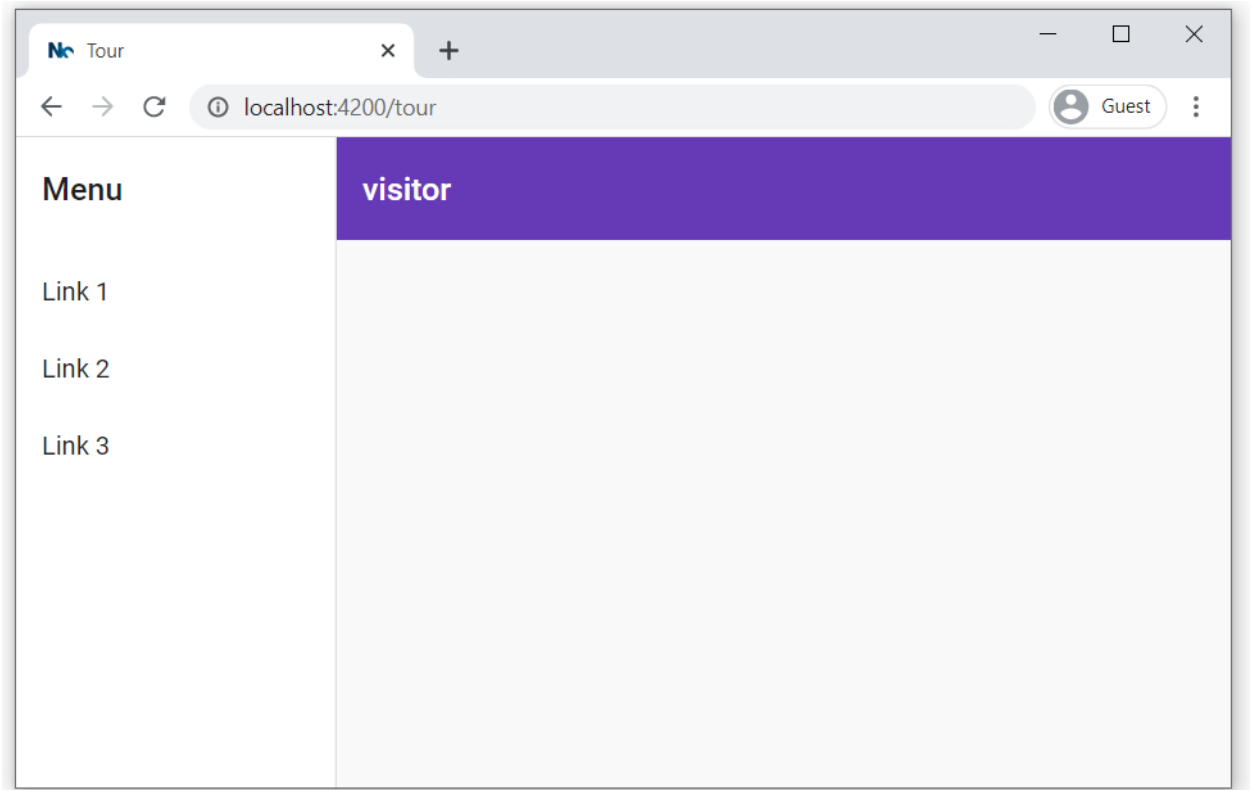

flat

☑ Flag to indicate if a dir is created.

path

The path to create the component.

libs/visitor/src/lib

name

Library name

admin

name *

The name of the component.

admin

project

The name of the project.

admin

flat

☑ Create the new files at the top level of the current project.

path

The path at which to create the component file, relative to the current workspace. Default is a folder with the same name as the component in the project root.

libs/admin/src/lib

admin works!
